

Title: Java Developer

Reports to: Director of Operations

Truth Technologies provides a complete risk compliance platform including sanction screening, anti-money laundering (AML) protection, and supplementary reporting. We also provide additional information and solutions for Financial Technology (FinTech), Regulatory Technology (RegTech), and Know Your Customer (KYC) protection.

If you are passionate about developing quality solutions and thrive in a fast paced, forward-thinking environment, then this could be the ideal opportunity for you. Because we are a small team, the expectation is that you will bring your development experience as a strength. You will work independently but will have a team of high performers to lean on when necessary. The team will be growing as the need arises; therefore, the candidate could grow with it, expanding their skill-set, keeping pace with future developments.

Truth Technologies, Inc. is presently setting up its core development team for the future. The success of the candidate is therefore essential for the future of the company. It is very important to emphasize the need, not only for excellent technical skills, but also for team-skills since that is key to integrating the small team in-charge of managing the company. Transparency and a pro-active willingness to share information are essential.

Summary

A qualified developer will possess strong analytical skills, a willingness to learn and grow their skill set, and be comfortable working across different client environments. Candidates should be able to identify new feature opportunities, designs, and develop solutions that improve clients' operations and efficiencies. This role will blend application design and development skills to build solutions that deliver with speed and scale.

Primary Duties/Responsibilities

- Designing new features and services
- Integrate performance, regression, and security testing into workflow
- Perform occasional system maintenance
- Coordinate with existing team on development priorities and deployment timeline
- Provide in-depth documentation for new and existing projects
- Develop software to integrate with internal back-end systems

- Develop application usage analytics for UI improvement insights
- Perform root cause analysis and resolve technical issues
- Integrating new data vendors/sources/services into existing applications

Skills and Qualifications

- 2-5 years of experience developing software in Linux platforms. Familiar with Linux administration is a plus.
- 3-5 years of experience developing with Java, or similar platform
- 1-3 years of experience with configuration management tools such as Ansible, Puppet, or Chef
- 1-2 years working experience with automation scripting with Python or similar
- 1-3 years working experience of Oracle DB or other RDBMS.
- Communication skills: must be able to integrate a small team and be pro-actively open and ready to share knowledge.
