Title: DevOps Engineer

Reports to: Director of IT

Truth Technologies provides a complete risk compliance platform including sanction screening, anti-money laundering (AML) protection, and supplementary reporting. We also provide additional information and solutions for Financial Technology (FinTech), Regulatory Technology (RegTech), and Know Your Customer (KYC) protection.

If you are passionate about developing quality solutions and thrive in a fast paced, forward-thinking environment, then this could be the ideal opportunity for you. Because we are a small team, the expectation is that you will bring your development experience as a strength. You will work independently but will have a team of high performers to lean on when necessary. The team will be growing as the need arises; therefore the candidate could grow with it, expanding their skill-set, keeping pace with future developments.

Truth Technologies, Inc. is presently setting up its core IT team for the future. The success of the candidate is therefore essential for the future of the company. It is very important to emphasize the need, not only for excellent technical skills, but also for team-skills since that is key to integrating the small team in-charge of managing the company. Transparency and a pro-active willingness to share information are essential.

Summary

A qualified DevOps Engineer will possess strong analytical skills, a willingness to learn and grow their skill set, and be comfortable working across different client environments. Candidates should be able to identify new feature and automation opportunities & design and develop solutions that improve clients' operations and efficiencies. This role will blend system administration, application design, and development skills to build solutions that deliver with speed and scale.

Primary Duties/Responsibilities

• Designing infrastructure and automated systems to support distributed architecture

• Integrate performance, regression, and security testing into workflow

• Developing tools to manage and triage code contributions, configuration and deployment of infrastructure

• Perform occasional system maintenance

• Deploy updates and bug fixes

• Provide Level 2 technical support

• Provide in-depth documentation for new and existing projects

• Build tools to reduce occurrences of errors and improve customer experience

• Develop software to integrate with internal back-end systems

• Develop application usage analytics for UI improvement insights

• Perform root cause analysis for production errors

• Perform root cause analysis/Investigate and resolve technical issues

• Integrating new data vendors/sources/services into existing applications

• Development of and training on forecasting and planning techniques

Skills and Qualifications

• 3-5 years of experience with AWS: setting up, maintaining, and evolving the cloud infrastructure of web applications.

• 3-5 years of experience with IT Security: developing policies and procedures, monitoring operations & infrastructure, and maintain security tools and technology

• 2-5 years of experience of Linux administration.

• 2-5 years of experience with data tools like Elasticsearch, Oracle DB, and PostgreSQL

• 2-5 years of experience developing with Java, JavaScript, NodeJS, or similar

• 1-3 years of experience with configuration management tools such as Ansible, Puppet, or Chef

• 1-2 years working experience with automation scripting with Python or similar• Experienced in using CI/CD tooling with Jenkins, Azure Devops or similar technologies

• Communication skills: must be able to integrate a small team and be pro-actively open and ready to share knowledge.
